Product: Recombinant Mouse MIP-1β (CCL4)
Cat #: 300-334P
Powder

Description
Macrophage Inflammatory Protein-1 beta (MIP-1β), also known as CCL4, is produced by macrophages and thought to induce inflammatory responses, including superoxide production by neutrophils. MIP-1α and MIP-1β can exist as a naturally occurring heterodimer has been shown to have antiviral activity against HSV-1.
Alternate names: CCL4, ACT-2

MW
Non-glycosylated protein, containing 69 amino acids, with a molecular weight of 7.9 kDa.

Physical Appearance
Sterile filtered white lyophilized (freeze-dried) powder.

Source
E. coli

Formulation
Recombinant mouse MIP-1β is lyophilized with no additives.

Reconstitution
Centrifuge vial before opening. When reconstituting the product, gently pipet and wash down the sides of the vial to ensure full recovery of the protein into solution. It is recommended to reconstitute the lyophilized product with sterile water at a concentration of 0.1 mg/mL, which can be further diluted into other aqueous solutions.

Stability
Lyophilized product is very stable at -20°C. Reconstituted material should be aliquoted and frozen at -20°C. It is recommended that a carrier protein (0.1% HSA or BSA) is added for long term storage.

Biological Activity
The activity is determined by the ability to chemoattract human PBMCs or THP-1 cells at 20-100 ng/mL.

Endotoxin Level
Measured by kinetic LAL analysis and is typically ≤ 1 EU/μg protein.
